## Application Cover Letter

I have worked for NTT Docomo, Oracle, IBM and recently for a startup for many years to see it grow.

Check out my portfolio at <https://patriks.net/>  
I worked on a lot of Unity projects over the years, all of them personally and freelance.

During my past work experiences I worked with in talented teams and maintained big codebases, acquired various skills and knowledge.

Solving problems, designing systems, engineering, architecture as well as organizing solutions are what I like. But most problems cannot be solved by yourself, so the social skill necessary to conjure cooperation and diplomacy are what excite me in other ways as well as core psychology.  
I lead a team of engineers in university, and got many such opportunities in companies over the time.

I have been looking to move my career to the next step into technical management.

My English is on native level.

I am looking forward to having a talk with you.  
Best Regards,  
Patrik Schulze
